

A HIGH YIELDING NASAL SWAB WITH SUPERIOR SAMPLE CAPTURE AND ELUTION.

Rhinoswab Junior delivers comfort, reliability and performance, enhanced by novel features that reduce the fear and distress associated with the use of respiratory swabs for children aged 4-14 years.

Rhinoswab Junior can be used for rapid antigen and PCR tests, working seamlessly with existing vials and transport media.

Studies have confirmed that the Rhinoswab Junior

1. Has comparable sensitivity to regular swabs across 12 different respiratory targets.
2. Is preferred by children and their parents over regular swabs.

Rhinoswab Junior is FDA registered, included in the ARTG and has been awarded a CE Mark. Patents are pending.

APPLICATIONS

- For collection of pathogens and biological samples from the nose for diagnostic testing of respiratory viruses including COVID-19
- Designed for easy self collection for rapid antigen and PCR tests

DIMENSIONS

- 44.2mm total length
- 45mm nasal tip width
- 6.4 mm nasal tip height
- 33.2mm handle length
- 16mm total width of double loop

QUALITIES

- Larger contact area to maximize sample capture
- Superior sample elution
- Medical grade quality
- Painless and simple self-administration

Loops ergonomically designed to sit comfortably in each nostril for pain free self sampling

Loops break off into standard collection tubes

Double loops anatomically designed to maximise contact area between the swab and the nose to maximise yield

Novelty handle allows for easy and standardised self-swabbing and reduces testing fears

REFERENCE NUMBER	PACKAGING
JRSB- 2X500	Rhinoswab Junior Small, 2 bags of 500 in an outer carton
JRRB 2X500	Rhinoswab Junior Regular, 2 bags of 500 in an outer carton
RSWB 2X500	Rhinoswab Adult, 2 bags of 500 in an outer carton
TSWB 2X500	Rhinoswab Adult with collection tube, 2 bags of 500 in an outer carton
