

RHINOSWAB JUNIOR SPECIFICATIONS

RHINOSWAB
JUNIOR
by RHINOMED

Rhinoswab Junior delivers comfort, reliability and performance, enhanced by novel features that reduce the fear and distress associated with the use of respiratory swabs for children aged 4 years and over.

Rhinoswab Junior can be used for rapid antigen and PCR tests, working seamlessly with existing vials and transport media.

Studies have confirmed that the Rhinoswab Junior¹

1. Has comparable sensitivity to regular swabs across 12 different respiratory targets.
2. Is preferred by children and their parents over regular swabs.

RHINOSWAB JUNIOR REGULATORY INFORMATION:

FDA Registration Number: 3011194487

ARTG Identifier: 349491

MHRA Application Reference:

Health Canada MDEL: 6789

CE Mark Certificate Number: 542839

2022042501259656

APPLICATIONS

- For collection of pathogens and biological samples from the nose for diagnostic testing of respiratory viruses including COVID-19
- Designed for easy self collection for rapid antigen and PCR tests

DIMENSIONS

- 44.3mm total length
- 34.0mm total width
- 4.5mm nasal tip width
- 6.4mm nasal tip height
- 16.0mm total width of double loop

QUALITIES

- Larger contact area to maximize sample collection
- Superior sample elution
- Medical grade quality
- Painless and simple self-administration

Loops ergonomically designed to sit comfortably in each nostril for pain free self sampling

Loops break off into standard collection tubes

Double loops anatomically designed to maximise contact area between the swab and the nose to maximise yield

Novelty handle allows for easy and standardised self-swabbing and reduces testing fears
